Canalta Flow Measurement is a privately held Canadian company that began operations in 1986 as an instrumentation and electrical contractor. Since 1991, the focus has been on the manufacture of industrial control and measurement equipment. The company now manufactures and services several product lines specifically targeting the oil and gas industries, and supplies product across North America, South America, Asia and the Middle East. Canalta has grown to include primary manufacturing and warehousing facilities in Red Deer Alberta (Canada), Coimbatore (India), Incheon (Korea) and Denton, Texas, (USA), direct sales offices in Buenos Aires (Argentina), Norfolk (United Kingdom), India and Singapore, with an extensive global distribution network.

Quality Matters

When you are in the market for parts, trust the **OEM**. The quality of Canalta Orifice Fitting parts and accessories is our top priority. As standard our internal components are made from SS316 offering (stainless steel), providing reliability and performance over a long service life. These parts conform to NACE MR0175 / ISO 15156 specifications.

Our SS316 internals protect against mass loss due to general or localized corrosion and are ideal for extreme corrosive applications, such as wet H₂S service.

Standard plate seals and fitting O-rings are made of HNBR rubber, offering first-class compression set, tearing and abrasion performance, as well as excellent chemical resistance in oilfield applications, including H₂S and CO₂.

Wherever possible, Canalta has endeavoured to ensure that our parts and accessories offerings are interchangeable with the current industry standard orifice fitting brand, making Canalta Orifice Fitting parts and accessories suitable for re-builds and re-works of our competitors' product lines.

All materials meet the applicable ASTM requirements and are traceable to the foundry. Orifice plates and flow conditioners comply with AGA 3.2 specifications. Manufacturing at Canalta conforms to ASME codes B31.3, B16.5 and B16.34 latest revisions.

Close attention to detail and tight quality control auditing ensure that your Canalta Orifice Fitting parts and accessories are reliable and ready for service in any application.

DBB ORIFICE FITTINGS
ORIFICE FITTINGS***

***LOOK LIKE A
FAMILIAR
PROBLEM?***

The vast majority of orifice fittings in service in North America are in vertical flow or rotated installations, and anyone who has worked with these units knows the frustration of reassembly after maintenance. Valve components shift out of position, the valve strip is misaligned or the assembly falls out of the body completely.

That's why Canalta developed the **CLIP-STYLE VALVE CARRIER**, a unique package that holds the valve carrier, springs and valve strip together without affecting the critical performance of the slide valve as a whole. These units are already in service worldwide and can improve your field operations as well.

Say goodbye to misaligned or damaged valve strips. Say goodbye to using two pounds of grease to reassemble the orifice meter after maintenance. Available as a retrofit for all existing Canalta and Daniel® Senior® orifice fittings, and shipping as the standard valve carrier configuration in new Canalta DC, DBB and DC FCH units from March 2014, **Canalta's Clip-style Valve Carrier** makes reassembly both faster and easier than ever before.

Patent Pending

NOTE: Daniel® and Senior® are registered trademarks of Daniel Industries, Inc. Daniel Industries, Inc. is not affiliated with Canalta Flow Measurement in any manner. ***SPARE PARTS FOR ALL
8"+ SINGLE CHAMBER,
DUAL CHAMBER &
DBB ORIFICE FITTINGS***

CANALTA REPAIR KITS**CANALTA ORIFICE FITTING REPAIR KITS**

include a full complement of orifice fitting parts allowing for a complete rebuild of the orifice fitting or replenishment of spare parts inventory. The kits are available with 316 stainless steel internals for standard applications or Duplex and Super Duplex internals for extreme corrosive applications. All repair kits include high grade HNBR internals and are packaged in a sturdy resin case for easy storage or transport.

Repair kits for Daniel® Senior® Orifice Fittings are equally comprehensive. These parts can also be supplied on an individual basis. Please contact us for full details on our servicing of Daniel product lines.

Trust Canalta Flow Measurement for high quality, competitively priced OEM and interchangeable orifice fitting

FULL REPAIR KITS

The repair kit part numbers are in the following format:
KIT - KIT TYPE - SIZE - ANSI CLASS - SEAL GAP - TRIM - VALVE SEAT

KIT TYPE - 'C' (2000 Edition), 'D' (85 Edition), 'DN' (Daniels Notched)
ANSI CLASS - 90 (150-900 ANSI), 150 (1500 ANSI) & 250 (2500 ANSI)
METER TYPE - SC (Single Chamber), DC (Dual Chamber), & DBB (Double Block & Bleed)
SEAL GAP - 562 (0.562 - 2"-6"), 688 (0.688 - 8"-14"), 813 (0.813 - 16"-20") & 875 (0.875 - 24"-30")
TRIM - SS (Corrosive Stainless Steel) & FSS (Full Stainless Steel). Other materials are available upon request.
VALVE SEAT - 'G' (Grease seat), 'S' (Soft Seat)
GEARS - '2' (Dual Shaft)

Canalta can also provide Commissioning Kits and Spares Kits for all of the meters. These kit part numbers are based on the same format as above, replacing the KIT TYPE with either 'COM' (Commissioning Kit) or 'SP' (2 years full maintenance kit for strip down and rebuild).

Commissioning Kits: Designed with replacement pieces that could potentially be damaged during transportation (IE: A gear assembly) and a set of replacement O-Rings. Intended for sale alongside new fitting orders.

2 Year Spare Parts Kits: Designed to include one change-out of the internal parts, two change-outs of the O-Rings, and only partial bolt up as these are seldom required to change out entirely. Intended for sale alongside new fitting orders.

NOTE: Daniel® and Senior® are registered trademarks of Daniel Industries, Inc. Daniel Industries, Inc. is not affiliated with Canalta Flow Measurement in any manner. Daniel Industries has not reviewed, sanctioned or endorsed any products manufactured, reconditioned, sold or marketed by Canalta Flow Measurement.

DBB, DUAL CHAMBER / 8"+ SINGLE CHAMBER FITTING PARTS

#8 Plate Carrier

Available in CF8M cast stainless steel as standard.

If 85 Edition parts are required, replace "92-SS" with "85-SS" (applicable for Standard non-notched only)

ORIFICE PLATES & PLATE SEALS

ORIFICE PLATES & PLATE SEALS

The **Type "K" Standard 2000 Edition Seal Assembly** is the standard seal supplied with all Canalta Orifice Fittings sizes 2" through 8". The assembly is comprised of a HNBR elastomer seal and stainless steel retainer ring. The single downstream seal function offers superior sealing capability while reducing seal damage during insertion. This design cuts in half the seals compressible material, resulting in less seal swell common in most applications. The durability of the stainless steel retainer ring leads to replacement costs of approximately 1/3 of other plate seals. Exact and repeatable concentricity is maintained with the metal to metal contact throughout the entire 360° circumference of the orifice plate to the plate carrier mechanism.

This unit is used with a .562" seal gap for fittings sized 2" through 6", and with a .688" seal gap for 8" fittings, meeting the 1992 and 2000 editions of AGA-3. Plate seal bypass tested down to 1" water column.

HNBR Elastomer Seal Ring			"K" Style Retainer Ring 316 Stainless Steel

6	6DC08H-00-HNBR-85D		6DC08K	
8	8DC08H-00-HNBR-85D		8DC08K	

The **Teflon Snap Seal** provides positive plate sealing in the harshest of process environments. The two-piece design snaps over the orifice plate without the use of metal clips or retainers. A specially designed recess absorbs insertion pressures, minimizing permanent compression and distortion.

30	30DC08IJ-00-500-875	

The raised section adjacent to the recess creates a positive seal against the orifice plate, preventing bypass leakage. These two unique design features enhance seal performance while extending the life expectancy of the seal assembly.

Teflon Snap Seals are available for 2000 Edition seal gaps. 85 Edition snap and clip-style Teflon seals are also available for some sizes. Please contact our offices for more information.

ORIFICE PLATES & PLATE SEALS

Notched Seals are used only with notched plate carriers. Notched seals are available in the HNBR wrap seal version and also Teflon Snap seal assemblies. Exact and repeatable concentricity is maintained with the metal to metal contact throughout the entire 360° circumference of the orifice plate to the plate carrier mechanism.

This unit is used with a .562" seal gap for fittings sized 2" through 6", and with a .688" seal gap for 8" fittings, meeting the 1992 and 2000 editions of AGA-3. Plate seal bypass tested down to 1" water column.

O-ring Style Seals are available in a Teflon Snap Seal and full Stainless Steel versions. With a combination of an internal o-ring seal and an external o-ring on the downstream face of the plate assembly, optimum sealing is achieved.

The Teflon O-ring snap seal is available in sizes 2" through to 12". The full stainless steel version is available in sizes 2" through to 24".

ORIFICE PLATES & PLATE SEALS

The **Bonded "FLEX" Seal** is designed with a unique "hollow core" recess, this seal has impressive expansion and contraction capabilities when compared to traditional solid rubber seals. The recess allows the seal to absorb insertion pressures, minimizing tearing, distortion and permanent compression. This design will also accomodate expansion and distortion in the seal gap when under pressure - a problem common to many large-sized fittings.

The 70 Durometer HNBR seal is adhesively bonded to the orifice plate, creating total and permanent contact between the plate and seal and preventing bypass leakage. These units are typically supplied as seal and orifice plate packages and are available for model sizes 10" and larger.

HNBR Bonded plates are available in various plate thicknesses. Please contact the sales department for more info

Clip Style Teflon Snap Seal

Canalta supplies a selection of legacy plate seals for situations in which direct and exact seal replacement is required or preferred. Models include two piece **Clip-style Teflon** seal assembly. Once assembled around the orifice plate the steel clip ensures that the teflon assembly does not become accidentally separated during plate removal.

Size and pipe schedule availability varies by model. Please contact us for more information.

ORIFICE PLATES & PLATE SEALS

The **Wrap Around Seal** provides positive plate sealing. The one-piece design stretches over the orifice plate without the use of metal clips or retainers. A specially designed recess absorbs insertion pressures, minimizing permanent compression and distortion.

The raised section adjacent to the recess creates a positive seal against the orifice plate preventing bypass leakage. These two unique design features enhance seal performance while extending the life expectancy of the seal.

Available in 2" through to 12" and in HNBR.

NOTES

ORIFICE PLATES & PLATE SEALS

Canalta has been a trusted supplier of AGA-3 / API 14.3 and ISO 5167-2 compliant orifice plates for years. We stock a wide selection of standard concentric universal orifice plates for gas and liquid flow measurement in 316 stainless steel. These units are perfect for any Single or Dual Chamber Orifice Fitting.

Paddle plates for use with Orifice Flange Unions and orifice plates for special applications are available. Canalta also supplies orifice plates in exotic materials, such as Monel™, Inconel™ and Hastelloy™.

Canalta can provide comprehensive Orifice Plate Inspection Reports complete with calibration certificates and mill test reports.

Restriction Orifice plates are also offered as part of an engineered solution.

Contact us today to find out more about our competitive pricing and quick delivery times on all types of orifice plates.

FLOW CONDITIONING SOLUTIONS

**CONTOUR FLOW CONDITIONERS**

Contour™

Flow Conditioning Solutions

by **Canalta** ➤

Contour™ K5 and Z Flow Conditioners maximize orifice meter accuracy while significantly reducing upstream pipe length requirements. This common design fully develops the flow profile and helps to eliminate flow disturbances without creating a significant pressure drop. Accurate flow metering is possible in a host of line configurations, including multiple elbows in or out of plane, tee intersections and partially closed or nominally opened valves. Installation, maintenance and initial capital cost are easy and economical, and the resilient one-piece design ensures a long service life. Standard 316 stainless steel makes these flow conditioners suitable for all applications, including extremely corrosive environments.

Contour™ K5 Flow Conditioners are designed and manufactured to the exact geometries of the popular K-Lab / Nova design (CPA 50E®) which has achieved broad acceptance within the flow measurement industry. **Contour™ Z Flow Conditioners** include the 32-hole Zanker plate geometry. Contour™ Z Flow Conditioners are only available in flange style.

Flange-style Flow Conditioners are installed between two raised face or ring-type joint flanges upstream of the orifice plate. Available for pipe sizes 2" through 30" in all standard schedules, with custom schedules by special order.

Pin-style Flow Conditioners are line mounted with a set pin in the wall of the upstream pipe. Available for pipe sizes 2" through 4" in all standard schedules, with custom schedules by special order.

Other types of Flow Conditioner also available include 'Zanker', 'Gallagher', 'Spearman'. Customer specific solutions also considered.

Contact one of our sales representatives today for full details, technical specifications and ordering information.

Note: CPA 50E is a registered trademark of Canada Pipeline Accessories Co. Ltd. Daniel Industries, Inc. (Zanker) and Canada Pipeline Accessories are not affiliated with Canalta Flow Measurement in any manner, nor have they reviewed, sanctioned or endorsed any products manufactured, reconditioned, sold or marketed by Canalta Flow Measurement.

FLANGE & PIN STYLE FLOW CONDITIONERS

Canalta Contour Flow Conditioners for installation upstream of the primary meter are available as Pin type (PIN), Raised Face (RF) and Ring Type Joint (RTJ) formats. Common Flow Conditioner types available are Contour™ and Zanker with custom schedules by special order.

Part Numbering format is as follows;

SIZE - Pin Type: 2", 3" or 4", Flanged Type: 2"-30" (larger sizes available upon request)

ANSI - 60 (150-900 ANSI)*, 150 (1500 ANSI), 250 (2500 ANSI)*

CON - Connection type - PIN, (available from 150-2500 ANSI) IG (Integral Gasket for 2" Contour only, 150-600 ANSI with part no. "260" and 900-2500 ANSI with part no. "2150")*, RF (Raised Face)*, RJ (Ring Type Joint)*

SCH - Pipe Schedule

TYPE - CONTOUR™ (CK5), ZANKER (ZAN)

MATERIAL - 316 SS, DUPLEX (2205), SUPER DUPLEX (2507)

Contour™

Flow Conditioning Solutions

by **Canalta** ➤

The Contour™ FCH (Flow Conditioner Housing) similar to the practicality of inspecting and changing an orifice plate, the Contour™ FCH (Flow Conditioner Housing) allows for regular inspections of the flow conditioner without breaking apart the flow line. The Contour™ FCH allows the operator to easily perform flow conditioner inspection and maintenance on the same regular schedule as the orifice plate. With this innovative, newly patented design, you can be sure that your flow profile has not been degraded by damage, blockage or residue accumulation.

All bore surfaces and internal dimensions within the housing are manufactured to strictly comply with the latest editions of AGA-3 and ISO-5167. The Contour™ FCH is effective for both ultrasonic and differential pressure custody transfer applications, where flow profile and measurement accuracy are critical.

The body connects to the line upstream of the flow conditioning plate through an **integral body flange**. This design virtually eliminates flow disturbances caused by flange breaks, making your flow profile that much more reliable. Approved for 150 - 900 ANSI ratings, these integral body flanges also reduce costs by eliminating material and fabrication procedures.

Canalta's Contour FCH utilizes the new Contour™ K5+ and Z+ flow conditioners. These isolating flow conditioners incorporate a non-protruding HNBR seal around the downstream face to prevent bypass leakage and protect the integrity of your flow profile.

*Single Chamber Contour™ FCH
(US Patent 7, 806,145)*

(US nt , 145)

Key Features:

- Effective in all flow measurement applications where flow profile is critical for accuracy.
- Maintains flow conditioner alignment and positioning despite replacement or debris impact.
- Prevents bypass leakage.
- Allows for easy flow conditioner inspection, removal and replacement.
- Effective in both retrofits and new projects.
- Available in sizes 2" - 12" NPS.
- Can be fitted for standard or extreme corrosive service.
- Available in both single and dual chamber designs.

VANE TYPE FLOW CONDITIONERS

ContourTM

Flow Conditioning Solutions

by **Canalta**

ContourTM Vane Flow Straighteners are available in the traditional 1998 uniform concentric 19-tube bundle configuration. Sized and assembled to AGA 3 / API 14.3 and ISO 5167-1 specifications, these straightening vanes are effective in aiding the removal of flow swirl and turbulence caused by upstream piping arrangements. Available in 316 stainless steel as standard, the ContourTM Vane Flow Straightener is suitable for most process environments.

Flange-style straightening vanes are installed between two raised face or RTJ flanges upstream of the orifice plate. Available for pipe sizes 2" through 30" in all standard schedules, with custom schedules by special order.

Pin-style straightening vanes are line mounted with a 3/8" x 3/4" (16 UNC) set pin in the wall of the upstream pipe. Available for pipe sizes 2" through 30" in all standard schedules, with custom schedules by special order.
